

LEARNING OBJECTIVE: We will find the surface area of three dimensional objects including triangular and rectangular prisms. (G7M3L21)

ACTIVATING PRIOR KNOWLEDGE

We can find the area of rectangles and triangles

 <p style="text-align: center; margin-top: 10px;">7in.</p> <p style="text-align: right; margin-top: 10px;">$A = \frac{b \cdot h}{2}$</p> <p style="text-align: center; margin-top: 20px;">$\frac{7 \cdot 6}{2} = 21 \text{ in}^2$</p>	 <p style="text-align: center; margin-top: 10px;">11cm</p> <p style="text-align: right; margin-top: 10px;">$A = b \cdot h$</p> <p style="text-align: center; margin-top: 20px;">$11 \cdot 7.5$ $A = 82.5 \text{ cm}^2$</p>
--	---

CONCEPT DEVELOPMENT

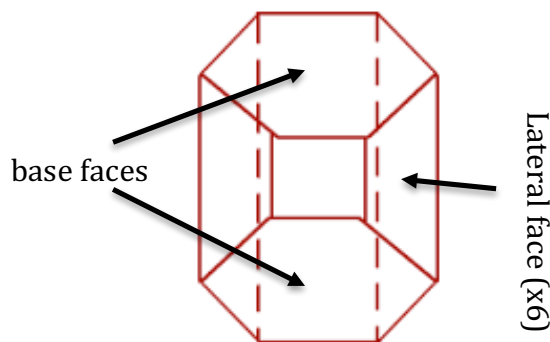

A **right triangular prism** is a three-dimensional object that has a triangle top and bottom. Its three other sides are rectangles.

A **right rectangular prism** is a three-dimensional object that has rectangles on top and bottom. Its four other sides are also rectangles.

Base faces: the top and the bottom of a right prism are called the base faces.

Lateral faces: The rectangles that form the 'sides' are lateral faces.

*triangle
rectangle
hexagon
etc.*

What is a **net**? How can it help?

2 Dimensional "flat" version of the surfaces of a 3 Dimensional object

How would you find the surface area of the following shapes?

$$(a \times h) + (b \times h) + (c \times h)$$

$$h(a+b+c)$$

$$A_{\text{base}} = a \cdot b \times 2$$

$$h \cdot b \times 2$$

$$h \cdot a \times 2$$

$$h(2a+2b) = A_{\text{lateral faces}}$$

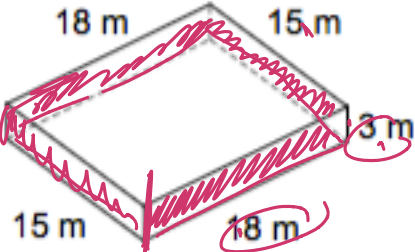

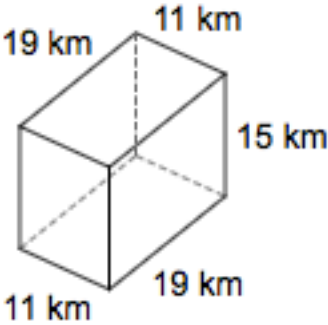

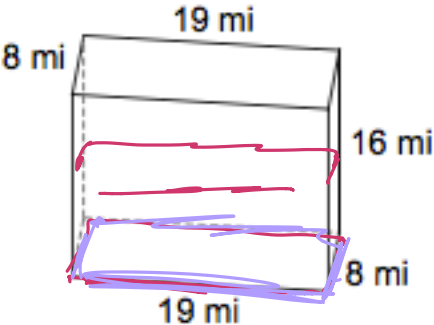

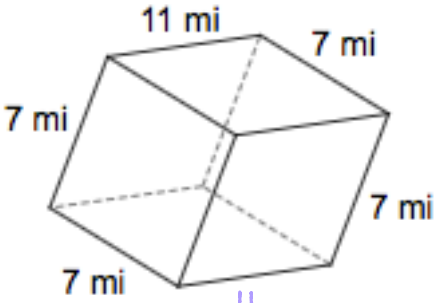

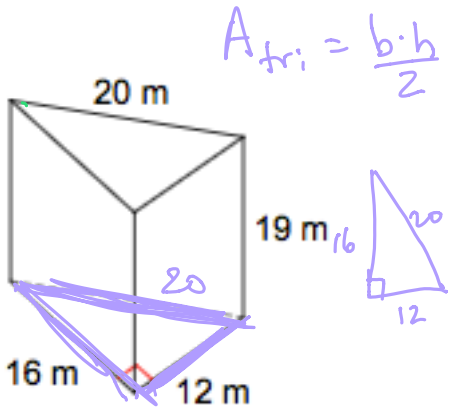

GUIDED PRACTICE

Steps for Finding the Surface Area of a Right Prism

1. Identify all relevant measurements.
2. Identify the shape of the base. Find the area of the base faces.
3. Find the area of the lateral faces.
4. Add the area of the base faces and the lateral faces.

RECTANGULAR PRISM

 <p> $A_{\text{Base}} = 18 \times 15 = 270 \text{ m}^2 \times 2 = 540 \text{ m}^2$ $h = 3$ Perimeter = $15 + 18 + 15 + 18 = 66$ $A_{\text{faces}} = 3 \times 66 = 198 \text{ m}^2$ </p> <div style="text-align: right; margin-right: 20px;"> $\begin{array}{r} 270 \\ 270 \\ \hline 540 \\ 45 \\ 54 \\ 45 \\ 54 \\ \hline 198 \end{array}$ </div> <p style="text-align: right;">$SA = 738 \text{ m}^2$</p>	 <p style="text-align: right;">1318 km^2</p>
 <p> $\text{Base} = 19 \times 8 = 152 \times 2 = 304 \text{ sq. mi.}$ $h = 16$ Perim $19 + 8 + 19 + 8 = 54$ Area of sides = $16 \times 54 = 864 \text{ sq. mi.}$ $304 + 864 = 1168 \text{ sq. mi.}$ </p>	 <p> $\text{Base } 7 \times 11 = 77 \times 2 = 154 \text{ sq. mi.}$ $h = 7$ Perimeter of base = $7 + 11 + 7 + 11 = 36$ Area of sides $36 \times 7 = 252 \text{ sq. mi.}$ Surface Area $252 + 154 = 406 \text{ sq. mi.}$ </p>

$A_{tri} = \frac{b \cdot h}{2}$

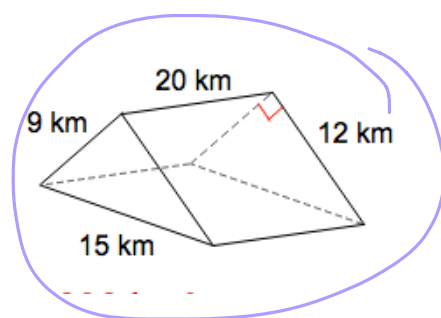

$A_{tri} = \frac{1}{2}(16 \cdot 12) = 96 \times 2 = 192 \text{ sq. meters}$

$h = 19$

Perim = $20 + 12 + 16 = 48$

$A_{sides} = 19 \times 48 = 912 \text{ sq. meters}$

$SA = 192 + 912 = 1104 \text{ m}^2$

$A_{tri} = \frac{b \cdot h}{2}$

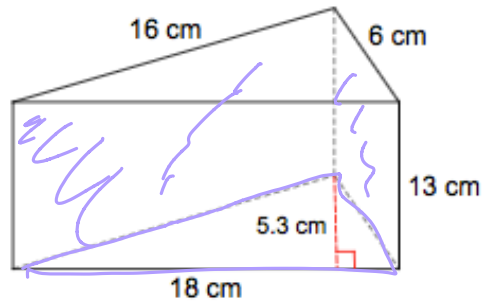

Area $\Delta = \frac{9 \cdot 12}{2} = 54 \times 2 = 108 \text{ km}^2$

$h = 20$

Perim = $9 + 12 + 15 = 36$

$A_{sides} = 720 \text{ km}^2$

$SA = 108 + 720 = 828 \text{ km}^2$

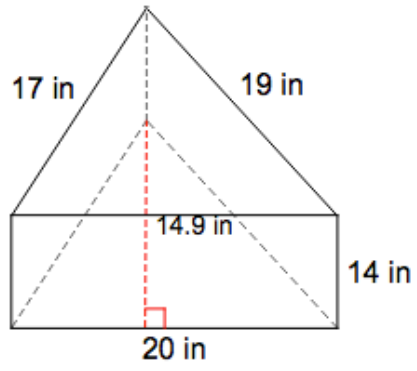

$6 + 18 + 13 = 40 \text{ cm (perim)}$

$h = 5.3$

$A_{sides} = 13 \times 40 = 520$

$A_{tri} = \frac{1}{2}(18 \cdot 5.3) = 47.7 \times 2 = 95.4$

$17 + 19 + 20 = 56 \text{ in (perim)}$

$h = 14.9$

$A_{sides} = 14 \times 56 = 784$

$A_{tri} = \frac{1}{2}(20 \cdot 14.9) = 149 \times 2 = 298$

$SA = 784 + 298 = 1082 \text{ in}^2$
