**LEARNING OBJECTIVE:** We will sequence all rigid motions (translations, reflections, and rotations). (G8M2L6)

### ACTIVATING PRIOR KNOWLEDGE:

We remember how to rotate objects on a coordinate plane—Rotate each object 90 degrees around the origin.

### CONCEPT DEVELOPMENT:

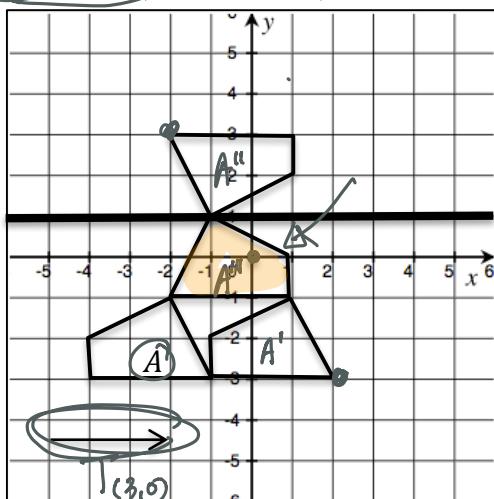

We've already looked at sequences involving translations and reflections...now it's time to include rotations.

**Does the order of the sequence of rigid motions matter?**

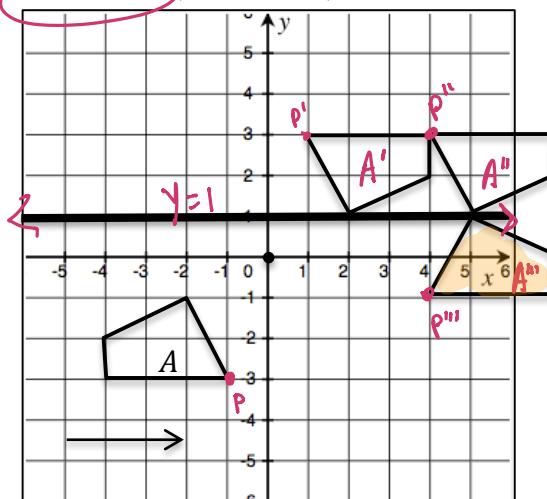

YES!! Each rigid motion tells a story about the path of the object.

YES!! The final location of the object **WILL LIKELY** be different depending on the ordering of the rigid motions!

**Translate, Rotate 180, then reflect**

**Rotate 180, translate, then reflect**

**GUIDED PRACTICE:****Steps for Sequencing Rigid Motion Transformations**

1. Read the directions carefully.
2. Perform each transformation in sequence.

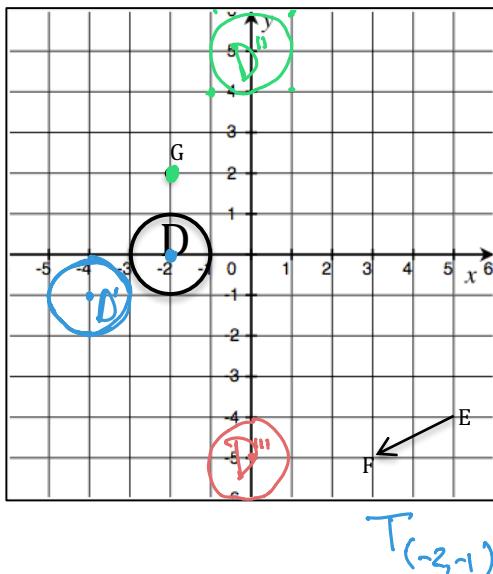

Rotate  $\Delta ABC$   $180^\circ$  around center  $O$  and then rotate  $90^\circ$  around center  $E$ .

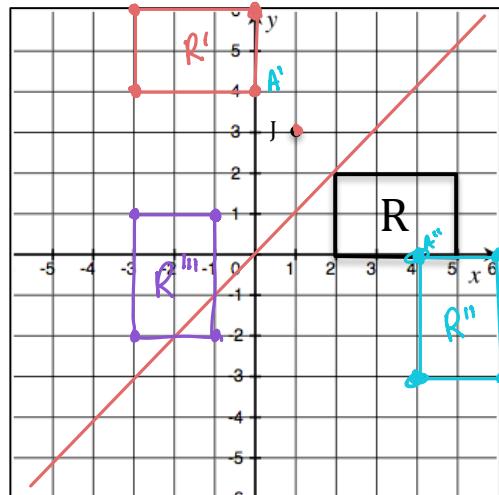

Rotate  $\Delta DEF$   $90^\circ$  around center  $X$  and then rotate  $90^\circ$  around center  $Z$ .

First translate circle  $C$  along  $\overrightarrow{EF}$ , then rotate  $180^\circ$  around center  $G$ , and then reflect over the  $x$ -axis.

First rotate the rectangle  $R$   $180^\circ$  around the center  $J$ , then reflect it across the line  $y = x$ . Lastly, perform translation  $T_{(-7,1)}$ .

First reflect the given object over the  $y$ -axis, then perform the translation  $T_{(-3-1)}$  and finally, rotate around the origin  $90^\circ$ .

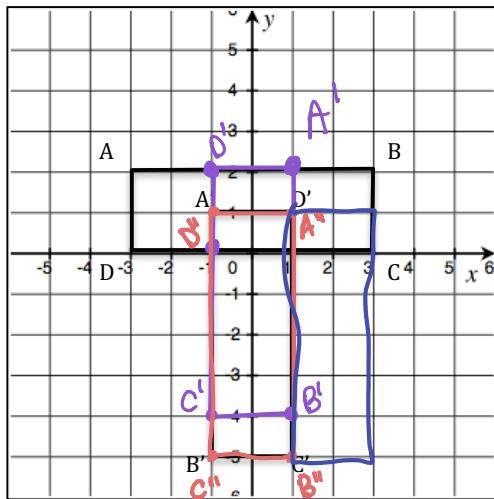

Can you describe a series of rigid motions that would map line segment  $\overline{OP}$  to  $\overline{O'P'}$ ?

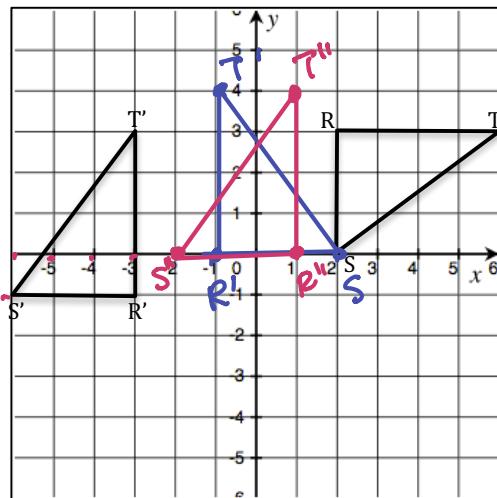

ROTATE  $90^\circ$  CLOCKWISE AROUND P  
 $(-3, -1)$

$T_{(-2, 0)}$

Can you describe the series of rigid motions that will map ABCD to A'B'C'D'?

Can you describe the series of rigid motions that would map RST to R'S'T'?

Rot  $90^\circ$  CW around  $(-1, 0)$

$T_{(0, -1)}$

Reflect across  $x=1$

$T_{(-2, 0)}$

**Line of Learning:**

Write 3 things you know about the rigid motion transformations we've been talking about and the sequencing of these motions.

1.

2.

3.
